

Limited Liability Company "ProfSantechService" invites for cooperation enterprises, the field of activity of which is the construction of engineering communications, as well as buildings and structures.

LLC "ProfSantechService" was founded in 2010. and is a manufacturer of trench supports and metal building structures.

Trench construction supports are used to strengthen the walls of a trench, foundation pit, mine during the laying and repair work of engineering communications (water supply, sewerage, gas pipeline), construction of foundations for buildings and structures.

Trench supports of modular type are specially designed for laying utility networks within the city. In the cramped conditions of urban development, this is an indispensable equipment for safe construction work.

Roller-type trench supports are mainly used when carrying out construction work at great depths (4m up to 12m).

The soil outside the trench remains completely intact.

All types of metal supports are provided with technical documentation and comply with the requirements of current regulatory documents and are certified in the Republic of Belarus.

Metal building structures are used for the construction of pre-fabricated buildings and structures (trusses, beams, girders, etc.).

The enterprise has extensive experience in the practical use of manufactured metal products (more than 10 years), constantly improving the technology for the manufacture of supports and building structures.

LLC "ProfSantechService" offers training of technical personnel on the basis of the Y. Kupala Grodno State University (Institute for Advanced Studies and Retraining of Personnel) for the installation of supports at the construction site, according to the developed standard technological maps.
